

Edikan Ekong – Support Engineer

Eddieanddata@gmail.com | 343.558.1205 | [LinkedIn](#)

SKILLS

Technical Support & Systems

SaaS Support • Escalation Management • Root Cause Analysis • System Logs • Technical Diagnostics • API Debugging •

Integrations • Linux Networking & Infrastructure

TCP/IP • DNS • HTTP • SSH • System logs • FQDN •

Networking Fundamentals

Data/Scripting/Tools

Python • Snowflake • SQL • dbt • Airflow

Cloud and Platforms

AWS • CI/CD • Docker (basic)

AI Tools:

Chatgpt • Codex • AI-assisted Automation

Support & Collaboration

Zendesk • Jira • Hubspot •

Salesforce • Slack

Soft skills

Strong Communicator • Problem-Solving • Teamwork • Eager to learn

CERTIFICATION

AWS Certified Cloud Practitioner
CERTIFIED

AWS Certified Solution Architect
In view

EDUCATION

University of Ottawa

MENG IN COMPUTER
ENGINEERING

Sept 2020 - June 2024 |
Ottawa, ON

PROFESSIONAL SUMMARY

- Support Engineer with 3+ years of experience in SaaS, cloud, and networking environments. Expert in resolving escalations involving APIs, logs, and system behavior, maintaining 99% SLA and 95%+ CSAT. Strong in root-cause analysis, customer-facing support, and cross-functional collaboration to improve resolution speed and outcomes.

EXPERIENCE

SOLINK | SENIOR SaaS TECHNICAL SUPPORT SPECIALIST

March 2023 – Current | Ottawa, CA

- Serve as a primary technical contact for enterprise customers, resolving complex SaaS, networking, and system integration issues across cloud-based environments.
- Troubleshoot escalated incidents involving TCP/IP, DNS, HTTP, API failures, and application behavior using logs, CLI tools, and structured diagnostics.
- Investigate production issues by reproducing problems in controlled environments, analyzing logs, and identifying root causes across application and network layers.
- Remotely managed and maintained NAS devices, performing application deployments, updates, and health monitoring across distributed environments to ensure system reliability and uptime.
- Partner with internal teams to document recurring issues, improve troubleshooting workflows, and strengthen knowledge-sharing across support operations.
- Automated support workflows using Python, Bash, and AI-assisted tooling, improving first-response time by 35%.
- Manage high-volume support cases via phone, email, and live chat while maintaining **99% SLA** and **95%+ CSAT**
- Built proactive monitoring pipelines (AWS S3 → SQL → Looker) to detect system anomalies early, reducing downtime by **20%**
- Identified recurring incident patterns through log and monitoring analysis, helping reduce incident recurrence by 30%
- Participate in incident reviews and continuous improvement initiatives to enhance support processes.

E-HOSPITAL PROJECT, UOTTAWA | DATA ANALYST

May 2022 – July 2023 | Ottawa, CA

- Developed SQL-based data models and transformation pipelines to support analytics and reporting workflows
- Partnered with stakeholders to translate operational requirements into dashboards and insights using Tableau
- Improved reporting efficiency by 15% through automation and data quality enhancements.

EXXONMOBIL | MAINTENANCE DATA ANALYST

February 2021 – December 2021 | Nigeria

- Enforced data governance by managing **Data Access Control Lists (ACLs)** to provide secure, role-based access to business-critical datasets used for operational and executive reporting.
- Drove operational improvements by designing **interactive Excel dashboards** (DAX, pivots, slicers, dynamic charts) and a **risk-based work allocation model**, improving performance by **15%** and resource efficiency by **10%**.
